3D Printing is Revolutionizing Manufacturing 3D Printing, also called Additive Manufacturing, is the process of building a three-dimensional object by laying down successive layers of material. A 3D Computer Aided Design (CAD) model of the object is converted into a series of cross sectional slices that are sent to the 3D printer. The process allows manufacturers to speed up development cycles, make quick adjustments to molds and prototypes, and create highly complex and customizable parts. It is used in a wide array of applications, including rapid prototyping, jewelry casting, custom medical implant production, and manufacturing of complex automotive and aerospace components.

Global Healthcare 3D Printing key players include Stratasys, Materialise NV, EnvisionTEC, etc. Global top three manufacturers hold a share about 40%.

North America is the largest market, with a share about 45%, followed by Europe and Asia-Pacific, both have a share about 40 percent.

In terms of product, System/Device is the largest segment, with a share about 45%. And in terms of application, the largest application is Implants, followed by External Wearable Devices.
