System integration is defined in engineering as the process of bringing together the component sub-systems into one system (an aggregation of subsystems cooperating so that the system is able to deliver the overarching functionality) and ensuring that the subsystems function together as a system, and in information technology as the process of linking together different computing systems and software applications physically or functionally, to act as a coordinated whole.

The system integrator integrates discrete systems utilizing a variety of techniques such as computer networking, enterprise application integration, business process management or manual programming.

Health care and health systems integration aims to ensure that behavioral health care services are more accessible and connected to the broader health care system.

The integration of health information technology (IT) into primary care includes a variety of electronic methods that are used to manage information about people's health and health care, for both individual patients and groups of patients. The use of health IT can improve the quality of care, even as it makes health care more cost effective.
