Heart Block Therapeutics refers to treatments and technologies designed to manage and treat heart block, a condition in which electrical signals are partially or fully blocked from reaching the heart chambers. This disruption in electrical signals can cause irregular heartbeats, reduced heart function, and can be life-threatening in severe cases. Common treatment methods include pacemaker implantation, which helps regulate the heartbeat by delivering electrical pulses, and medications to improve heart function or manage underlying conditions. In recent years, advances in Heart Block Therapeutics have led to the development of more sophisticated pacemaker systems, wearable devices for early detection, and minimally invasive techniques for treatment. These new therapies aim to provide more efficient, long-term solutions with fewer side effects, helping patients maintain a better quality of life.
