The global Heart Defect Closure Devices market size is predicted to grow from US\$ 371 million in 2025 to US\$ 500 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

Heart defect closure devices are permanent implants designed to close defects between chambers of the heart or a patent ductus arteriosus. These are self-expandable, self-centering umbrella-like devices. The design and shape of the devices vary, as does their exact mode of deployment. They are implanted in the defect in a cardiac catheterization laboratory, through catheters inserted into either a vein or an artery (transcatheter or percutaneous approach). There are several types of defects, which include atrial septal defect (ASD), persistent patent ductus arteriosus (PDA), ventricular septal defect (VSD), patent foramen ovale (PFO), and left atrial appendage (LAA). Most of these defects are congenital, but can occur after a myocardial infarction or can be the result of a surgical repair of other congenital heart defects.

Global Heart Defect Closure Devices key players include St. Jude Medical, Starway, LifeTech, etc. Global top three manufacturers hold a share about 85%.

United States is the largest market, with a share about 70%, followed by Europe and China, both have a share over 25 percent.

In terms of product, ASD Closure Devices is the largest segment, with a share about 40%.
