A smart watch is an innovative product that lies between traditional watches and smartphones. It not only meets the accessory properties of traditional watches, but also achieves some communication functions of smartphones. Its small size, convenient to wear, and close to the skin of the human body enable it to monitor human health, making its application scenarios irreplaceable. The introduction of eSIM card effectively enhances the independence of smart watches and makes them get rid of the inherent impression of being Mobile phone accessories. As operators and terminal manufacturers continue to promote the development of eSIM, smart watches in the 5G era will become the new entrance and node of the Internet of Everything, with broad prospects for the industry. Smart watches can effectively collect and monitor various human data such as heart rate, blood oxygen, and blood pressure by sticking tightly to

the human skin and incorporating various sensors, helping users detect potential risks in advance.

The global smartwatch market size was USD 30,434.1 million in 2021 and is expected to expand at a compound annual growth rate (CAGR) of 8.2 % from 2022 to 2030.
