The global Heart Rate Variability Analysis System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Heart Rate Variability Analysis System (HRVAS) is a method used to analyze the variations in time intervals between consecutive heartbeats, known as R-R intervals, that can be measured using an electrocardiogram (ECG). HRVAS involves the use of specialized software and algorithms to extract various parameters from the R-R intervals, such as the standard deviation of normal-to-normal intervals (SDNN), root mean square of successive differences (RMSSD), high frequency power (HF), low frequency power (LF), and very low frequency power (VLF). These parameters are used to assess the autonomic nervous system (ANS) activity, which controls the heart rate, and to evaluate the cardiovascular health and physiological response to stress or exercise. HRVAS has been applied in various fields, including sports medicine, cardiology, neuroscience, and psychology.
