The global Heat-conducting Plastic market size is predicted to grow from US\$ 1379 million in 2025 to US\$ 1598 million in 2031; it is expected to grow at a CAGR of 2.5% from 2025 to 2031.

Heat-conducting plastic, also known as thermally conductive plastic, is a type of polymer material that has been engineered to possess thermal conductivity properties. Unlike traditional plastics, which are generally thermal insulators, heat-conducting plastics have the ability to efficiently transfer heat. This makes them useful in a variety of applications where heat dissipation or thermal management is crucial.

The demand for heat-conducting plastics was growing across industries such as electronics, automotive, aerospace, and consumer goods. As electronic devices became smaller and more powerful, efficient heat dissipation solutions were needed.
