The global Heat-Conductive Noise Suppression Sheet market size is predicted to grow from US\$ 1349 million in 2025 to US\$ 1962 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Heat-Conductive Noise Suppression Sheet is a type that features both high-noise suppression performance and thermal conductivity that enables protection of key devices from both heat and electromagnetic waves with a single sheet.

The increasing demand for high-performance and miniaturized electronic devices, such as smartphones, tablets, laptops, etc. These devices require effective EMI shielding and thermal management to ensure their reliability and functionality.

The rising adoption of electric vehicles (EVs) and hybrid electric vehicles (HEVs), which generate high levels of EMI and heat from their powertrains, batteries, and chargers. Heat-Conductive Noise Suppression Sheet can help protect the sensitive components and circuits from EMI and heat damage.

The advancement of technology and innovation in the field of Heat-Conductive Noise Suppression Sheet, such as the development of new materials, structures, and designs that can enhance the noise suppression and thermal conductivity performance of the sheet.

The favorable government regulations and policies that support the adoption of energy-efficient and environmentally friendly products, such as the EU Directive on Restriction of Hazardous Substances (RoHS) and the EU Regulation on Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).
