The global Heat Exchangers for Swimming Pools and Spa Pools market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The heat exchangers used in swimming pools and spa pools have been specially designed to have a larger surface area, suitable for lower water temperatures. In addition, although a single heat exchanger is sufficient for most installation scenarios, multiple devices can be installed in parallel for large or multiple water pools, allowing one unit to be cleaned or maintained independently without losing a significant amount of input heat in the pool water. Choosing the appropriate heat exchanger for a swimming pool or spa is crucial as it directly affects operating costs and energy efficiency, reduces the time required for pool water to warm up, and thus increases the availability of the swimming pool or spa.
