According to our LPI (LP Information) latest study, the global Heat Resistant ABS market size was valued at US\$ 1433.5 million in 2023. With growing demand in downstream market, the Heat Resistant ABS is forecast to a readjusted size of US\$ 2162.3 million by 2030 with a CAGR of 6.0% during review period.

The research report highlights the growth potential of the global Heat Resistant ABS market. Heat Resistant ABS are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Heat Resistant ABS. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Heat Resistant ABS market.

ABS is a kind of polymer obtained through the copolymerization of three kinds of monomers, namely acrylonitrile, butadiene and styrene. Each of these three monomers has a specific property: the addition of acrylonitrile can improve the anti-corrosion and rigidity properties, butadiene promotes the shock resistance and styrene will contribute the material good fineness. It is among the low cost engineering plastic that is easy to machine and fabricate. ABS is an ideal material for structural applications when impact resistance, strength, and stiffness are required. It is widely used for machining pre-production prototypes such as the auto dashboard since it has excellent dimensional stability and is easy to paint and glue. Natural (beige) ABS and black ABS are FDA compliant for use in food processing applications. Besides, it is widely used in the toys and electron industries including the PC enclosure.

Heat resistant ABS (HH ABS) is a grade of ABS. It has the second highest strength and

second lowest ductility compared to the other variants of ABS. This ABS resin offers superior heat resistance, shock resistance, and outstanding workability. It has wide-ranging use in items such as Automotive Usage parts, and electrical devices. In the report, the vicat softening temperature of high heat resistant is 109? and the vicat softening temperature of super high heat resistant is 115?.

The global top five heat resistant ABS manufacturers include LG Chem, INEOS Styrolution, Toray, SABIC, Chi Mei, with a total market share of more than 40%, of which the largest manufacturer is LG Chem, with a market share of more than 10%. South Korea is the most important heat resistant ABS producing area in the world, with a market share of about 20%. In terms of type, the market share of high heat resistance type is more than 75%. In the application field, the market share of the household appliances exceeds 30%.
