The global Heat Resistant Bronze Powder market size is predicted to grow from US\$ 668 million in 2025 to US\$ 912 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

Heat resistant bronze powder refers to powder made of various types of bronze or brass alloys, mainly used in lacquer or glazing medium, or together with copper powder paste (BRONING LIQOID) to form so-called imitation gold powder pigments. This powder can be used to replicate every shade of gold from light blonde, lemon to dark copper tones, sometimes with some dye added to the paint mix as well. Bronze powder will darken or fade in a short time. Bronze powders are rarely used in fine art because of their lack of permanence, and because the lacquers they make are dull and poorly grained.
