Polymethyl Methacrylate (PMMA) is a thermoplastic polymer of Methyl Methacrylate (MMA). It is a clear, strong and lightweight plastic generally used as a substitute to glass due to its energy efficiency and weather resistance. Heat resistant grade is a special grade of PMMA for excellent resistance to high temperature and to surface scratching. Outstanding transparency and weatherability are equivalent to general PMMA. This material is applied to parts that require high thermal stability such as high intensity lamps. The disadvantages of general-purpose grade PMMA are insufficient surface hardness, poor heat resistance, and low impact strength. The heat-resistant grade PMMA can withstand temperatures in excess of 110 degrees Celsius.
