A shrink tunnel (also commonly known as a heat tunnel) is a metallic tunnel that sits above or is built around a conveyor. The tunnel has a heating element that heats the products as they move through the machine. Your products are conveyed through the tunnel and are cloaked with loosely fitting shrink film. When your products move past the heating elements, the film shrinks uniformly around the items as they are exposed to the heat.

Heat shrink tunnel machines for plastics are commonly used equipment in the packaging industry. By controlling the temperature and direction of hot air, these machines cause plastic films to uniformly shrink over the surface of packaged items, achieving a tightly wrapped and protected effect. Widely utilized in sectors such as food, beverages, and consumer goods, this machinery provides efficient and aesthetically pleasing solutions for product packaging.
