Heat Source Photopolymerization 3D Printer is 3D method rely on the basic strategy? a liquid photopolymer contained in a vat (or tank) is selectively cured by a heat source. Layer by layer, a 3D physical object is built until completion. All vat polymerization technologies involve a photosensitive resin cured by a light source to produce solid layers and, eventually, whole parts. The resin is contained within a vat, or tank, and is cured against a build platform, which slowly rises out of the tank as the part is formed.
