## Abstracts

The global Heat Transfer Cement market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

With the continuous expansion of the consumer electronics market and the improvement of user needs, the application of thermal paste in the heat dissipation of electronic products will be more widely promoted. Because thermal paste has excellent thermal conductivity and adhesion and can meet the heat dissipation needs of various complex structures, it is widely used in electronic products such as mobile phones, tablets, and televisions. In the future, as the performance of electronic products continues to improve, the performance of thermal conductive putty in terms of heat dissipation will also face higher requirements, requiring further research and development of higher-performance thermal putty.
