Heated motorcycle gloves are specialized riding gloves designed to provide warmth and comfort to motorcyclists in cold or extreme weather conditions. Unlike standard gloves, heated gloves incorporate built-in electric heating elements, often powered by rechargeable batteries or directly from the motorcycle's electrical system, which deliver consistent heat to the fingers, palms, and back of the hand. These gloves typically feature multiple heat settings, allowing riders to adjust the temperature according to external conditions, while maintaining dexterity and grip control for safe handling of the motorcycle. In addition to heating elements, they often include waterproof or windproof materials, thermal insulation, and durable outer shells to protect against abrasion and moisture. By combining thermal management with protective design, heated motorcycle gloves enhance comfort, reduce the risk of numbness or frostbite, and enable riders to maintain control and performance during long rides in cold weather.
