The electric power steering is developed on the basis of the traditional mechanical steering system. It uses the power generated by the electric motor to help the driver perform steering operations. The system is mainly composed of three parts: signal sensing device (including torque sensor, steering wheel angle sensor and vehicle speed sensor), electronic control unit and steering assist mechanism (motor, clutch, reduction gear mechanism, etc.).

With the rapid development of the global logistics and freight industry, heavy commercial vehicles have become an important tool in fields such as cargo

transportation and engineering construction. In heavy-duty commercial vehicles with more difficult handling, electric power steering systems can improve driving maneuverability and safety and reduce driver fatigue, so they have attracted much attention from commercial vehicle owners and operators.
