The global Heavy-Duty Engine Degreaser market size is predicted to grow from US$ 1156 million in 2025 to US$ 1626 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Heavy-Duty Engine Degreaser is a high-performance cleaning chemical formulated to remove accumulated grease, oil, carbon deposits, and grime from engines, machinery, and industrial components. It typically contains a blend of surfactants, solvents (such as hydrocarbons, glycol ethers, or d-limonene), alkaline builders, and corrosion inhibitors that dissolve and emulsify heavy residues without damaging metal, rubber, or painted surfaces. The supply chain begins with upstream producers of petrochemical solvents, surfactants, and specialty additives, which are supplied to formulators and blending facilities where the degreaser is compounded and packaged into aerosol cans, bulk drums, or spray bottles. Midstream distributors and private-label brands then handle logistics, while downstream segments include automotive service centers, industrial maintenance firms, transportation fleets, and DIY consumers who use the product for engine cleaning, equipment maintenance, and degreasing operations. In 2024, global Heavy-Duty Engine Degreaser output was about 620,000 tons, with capacity near 750,000 tons, priced at USD 1,600–3,400 per ton, and an average gross margin of 28%.

United States market for Heavy-Duty Engine Degreaser is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
