The global Heavy Duty Plier market size is predicted to grow from US$ 1552 million in 2025 to US$ 2287 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Strong nippers are a type of manual tool for cutting metal wire and other materials by clamping them. Strong nippers are mainly used for cutting metal wires (wires and wires). Nippers are used according to the object to be cut.

Basically, all nippers called 'strong nippers,' refers to their cutting ability, which differs depending on the shape of the blade and its material. The center of the nipper's blade must be able to hold a specified test iron wire and cut it with a load less than the specified value at the point where the wire is inserted.

Strong nippers are generally similar in shape to pliers, but unlike pliers, the gripping point is the blade. Strong nippers consist of a blade, a joint that serves as a fulcrum, and a handle. Strong nippers are made with an emphasis on sturdiness, and feature a thick, strong blade and a sturdy joint. To use, place the line to be cut on the blade, grasp the handle tightly with your hand, and apply strong force to the blade using the principle of leverage. The blades are not crossed like scissors, but are symmetrically opposed. The blades are used to push through metal wires and other objects firmly. Since the blades must push through the wire with the blades properly facing each other, it is important that the joints have no play.
