A heavy-load electric gripper is a specialized, electrically powered end-effector designed to grip and manipulate objects that weigh considerably more than those handled by standard robotic grippers. These grippers are typically powered by high-torque electric motors (e.g., servo motors, DC motors, or stepper motors) and are capable of delivering high forces to handle heavy loads. The design of these grippers includes durable, high-strength materials for the jaws, reinforced structural components to support high forces, and advanced control systems for precise manipulation and safety in industrial environments.
