A heel stick safety lancet is a medical device used primarily for obtaining a small blood sample from the heel of an infant or a young child. It is designed with safety in mind. The lancet has a sharp tip that is used to puncture the skin of the heel just enough to draw a few drops of blood. The safety aspect comes into play through features such as a retractable or shielded needle. After the puncture is made, the sharp part of the lancet is either retracted into a housing or covered by a shield to prevent accidental needlestick injuries to the healthcare provider or anyone handling the used lancet. This helps reduce the risk of blood - borne pathogen transmission, such as infections from hepatitis B, hepatitis C, or HIV. Heel - stick safety lancets are an important tool in neonatal and pediatric care, especially for routine blood tests like screening for metabolic disorders or other medical conditions.
