The global Helical Wind Turbine market size is predicted to grow from US\$ 5959 million in 2025 to US\$ 8215 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

A helical wind turbine is a type of wind turbine characterized by its helical or spiral blade design, which allows it to capture wind energy efficiently from any direction. Unlike traditional horizontal-axis wind turbines, which typically have blades that rotate around a horizontal shaft, helical turbines have blades that are twisted in a spiral shape, enabling them to harness wind energy more effectively in turbulent or variable wind conditions. This design can reduce noise and vibration, and often requires less maintenance. Helical wind turbines are particularly suited for urban environments or areas with inconsistent wind patterns, making them an innovative option for renewable energy generation.

United States market for Helical Wind Turbine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Helical Wind Turbine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
