The global Helicopter Aiming Light market size is predicted to grow from US$ 117 million in 2025 to US$ 231 million in 2032; it is expected to grow at a CAGR of 10.4% from 2026 to 2032.

A helicopter aiming light is a lighting device used to assist landings at night or in low-visibility conditions, typically installed on helipads or ship decks. By emitting light of a specific intensity and color at a predetermined aiming point, it guides pilots to the precise landing position, improving flight safety and landing accuracy.Sales volume in 2024 is projected to reach 125,000 units, with an average price of US$880 per unit.

The upstream suppliers of helicopter aiming and lighting products primarily include suppliers of key components such as optical elements, LED light sources, and electronic control systems, as well as manufacturers of related electronic materials and casing structures. Product performance is highly dependent on the technological maturity and material quality of upstream suppliers, with particular emphasis on night vision compatibility, weather resistance, and anti-interference capabilities.

Downstream suppliers primarily serve military and civilian helicopter platform operators, such as the military, coast guard, emergency rescue, and energy companies. These products are widely used on shipboard platforms, helipads, and temporary landing areas in the field. With the increase in low-altitude flight missions and the growing demand for nighttime operations, the market is placing higher demands on the reliability and intelligence of these products, driving their continued application and development in downstream sectors.
