The global Helicopter Simulator market size is predicted to grow from US\$ 416 million in 2025 to US\$ 623 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

A flight simulator is a device that artificially re-creates aircraft flight and the environment in which it flies, for pilot training, design, or other purposes. It includes replicating the equations that govern how aircraft fly, how they react to applications of flight controls, the effects of other aircraft systems, and how the aircraft reacts to external factors such as air density, turbulence, wind shear, cloud, precipitation, etc. Flight simulators are widely used in pilot training, aircraft design, airborne equipment testing and other applications. The primary purpose of utilization of flight simulator is to train a pilot to achieve, test, and maintain proficiency in the operation of an airplane without risk to person or property and at a lower cost to training in the air.

Global main manufacturers of helicopter simulator include CAE, Thales and Reiser Simulation and Training, etc. The top three players hold a share about 58%. The global helicopter simulators are mainly produced in United States and Europe, they occupied for a share over 88%. North America is the largest market, has a share about 44%, followed by Europe and Asia-Pacific, with share 29% and 20%, separately.
