Helicopter landing gear is a device that supports a helicopter on the ground and usually includes one or more support legs. Helicopter wheel landing gear can be subdivided into retractable and non-retractable types. The wheeled landing gear reduces the difficulty of moving the helicopter, and it can be towed by external force or roll by itself. The non-retractable wheeled landing gear has the effect of enhancing the cushioning effect of hard landings. Retractable to reduce resistance and enhance stealth effect. The wheeled landing gear also allows the helicopter to take off with a rolling take-off, which can carry a larger load capacity than a normal vertical take-off.

The global Helicopter Wheeled Landing Gear market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
