A helium adsorber is a device or material used to capture and remove helium gas from a mixture of gases. It typically operates based on adsorption, where helium molecules adhere to the surface of a solid adsorbent material, such as activated carbon, molecular sieves, or specific metal-organic frameworks. These adsorbers are crucial in applications where helium needs to be purified or recovered, such as in cryogenics, gas chromatography, and helium recycling systems. The efficiency of a helium adsorber depends on the surface area, pore size, and affinity of the adsorbent material for helium. By selectively adsorbing helium, these systems help maintain the purity and quality of gases in various industrial and scientific processes.

The global Helium Adsorber market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
