Helium leak detection service is a specialized method used to locate and quantify leaks in a variety of sealed systems and components. Helium, being an inert and non-toxic gas with small molecular size, is an ideal tracer gas for leak detection purposes. During the process, the test object is pressurized with helium, and a sensitive helium leak detector is used to identify any escaping helium molecules, indicating the presence of a leak. Helium leak detection service is commonly employed in industries such as automotive, aerospace, HVAC, refrigeration, pharmaceuticals, and electronics, where the integrity of sealed systems and components is critical for safety, quality, and regulatory compliance. This service offers highly sensitive and reliable detection of leaks, even in hard-to-reach or inaccessible areas, ensuring the efficient operation of equipment and preventing potential hazards or product failures. Additionally, helium leak detection service is non-destructive and environmentally friendly, as helium is a safe and non-reactive gas that does not harm the environment or leave residues.

The global Helium Leak Detection Service market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
