A helium recovery system is a device or system that can recover, purify and reuse used helium. The system has different structures and principles for different applications. In science and industry, helium recovery systems usually use 'metal membrane separation' technology and purification technology. It separates helium from other gases based on the size of gas molecules and the interaction between gas molecules.

A helium recovery system generally includes an exhaust gas collection component, an exhaust gas purification component, a helium separation component and a purification component. The helium recovery system is used differently in different application scenarios. For example, in the industrial field, the exhaust gas is sent to the treatment facility along the pipeline through the exhaust gas collection component, and the helium is separated, impurities and other unnecessary gases are removed through various stages of separation and purification processes in the treatment facility, and the recovered helium is reused.

United States market for Helium Recovery Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Helium Recovery Systems is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
