This is a new generation hemispherical energy analyzer with a multimode transfer lens for angular and spatially resolved studies. It has a viewport for through-the-lens alignment of sample and excitation sources. This product has use of non-magnetizeable materials inside combined with very effective-metal shielding, along with small spot analysis down to 200m analysis. The high-transmission two-stage transfer lens was designed to yield intensities and well-defined optical properties. The unit has single and multi channel detection, and is available with five or nine channel detection as well.
