## Abstracts

The global HEPES Biological Buffer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

HEPES biological buffer is a type of buffer solution that contains the hydrophylic amino acid histidine, glutamic acid, arginine, and lysine, as well as the zwitterionic N-hydroxyethylpiperazine-N'-2-ethane sulfonic acid (HEPES). It is commonly used in cell culture and other laboratory experiments to maintain the physiological conditions of cells. HEPES biological buffer has good biocompatibility and stability, and can be used to culture various cells and tissues.

The industry trend of HEPES biological buffer is to further improve its stability, biocompatibility, and shelf life, and to reduce its cost. At the same time, the application of HEPES biological buffer in new fields such as regenerative medicine and precision medicine is also developing rapidly. The development of low-cost, high-quality HEPES biological buffer and its related products will become one of the main directions of the industry.
