Hereditary angioedema is a rare disease and is mostly mistaken for common allergic reactions and abdominal pain. This mainly on account of the lack of knowledge among both physicians and patients about the condition. About 40% of the affected patients are diagnosed correctly with hereditary angioedema in the US and Europe. With progress in diagnostic field and different initiatives undertaken by patient bodies and industry players to spread awareness, the market for hereditary angioedema is projected to grow.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
