Hernia is a type of disease in which the inner layers of abdominal muscles become weak, and the lining of abdomen bulges out into a small sac. It can affect multiple areas such as navel (umbilical hernia), groin (inguinal hernia), or incision site of surgery (post-surgery hernia). Watchful waiting and surgical procedures are the two measures by which hernia can be treated. The surgical procedures consist of two methods such as open tension-free repair surgery and laparoscopy. These surgeries are performed using mesh which are made up of synthetic material or biological material with the help of fixation devices.

The global Hernia Repair Consumables market size is projected to grow from US\$ 3380 million in 2024 to US\$ 4262 million in 2030; it is expected to grow at a CAGR of 3.9% from 2024 to 2030.

However, high cost of hernia repair procedures and unfavorable reimbursement policies would hamper the market growth in the near future.
