Hernia Repair PVP Device refers to a specialized medical device used in hernia repair procedures, particularly in minimally invasive or laparoscopic hernia repair surgeries. PVP typically refers to a procedural platform or device system used for patch placement, fixation, or positioning during hernia repair, helping surgeons accurately place and secure surgical mesh while reducing operation time and improving surgical precision. These devices are commonly used in inguinal hernia, ventral hernia, and incisional hernia repair procedures in hospitals and surgical centers.

The upstream of Hernia Repair PVP Devices includes medical-grade polymers, stainless steel components, surgical mesh materials, precision plastic components, and medical device electronic components. Midstream manufacturers produce hernia repair instruments, fixation devices, and surgical placement systems. The downstream mainly includes hospitals, ambulatory surgical centers, and specialized hernia treatment centers, where these devices are used in open and laparoscopic hernia repair procedures, driven by the increasing number of minimally invasive surgeries and aging population.
