The global Herriott Multi-pass Gas Absorption Cells market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The Herriott multi-channel gas absorption cell is suitable for laser spectroscopy analysis of a variety of gas molecular samples. The unique mirror design allows the laser beam to form multiple reflections in the absorption cell, and the effective optical path can reach tens of meters in a very small space, achieving efficient absorption of photons in a very small volume. Compared with the White cell, the Herriott cell has a more stable structure, better insensitivity to thermal deformation, smaller size, simpler installation, and more convenient operation. The cell is suitable for various application fields such as laboratory trace gas analysis, process gas spectrometers, and environmental pollutant monitoring.
