The global Hexafluoropropane Fire Extinguishing Device market size is predicted to grow from US\$ 225 million in 2025 to US\$ 275 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Hexafluoropropane fire extinguishing device is a high-tech green environmental protection fire extinguishing product. It consists of a fire extinguishing agent storage container, a start release component, a pressure gauge, a suspension bracket, etc. It can put out the initial fire of combustible solid, liquid, flammable gas and live equipment.

Hexafluoropropane (HFC-236fa) fire suppression system is a device that uses hexafluoropropane gas as the extinguishing agent. Depending on the installation method, hexafluoropropane fire suppression systems can be categorized into three types: piped-in systems, cabinet systems, and suspended systems. Hexafluoropropane extinguishing agent is a colorless, odorless, non-conductive, and non-residue gas, known for its clean, low-toxicity, good electrical insulation properties, and high fire suppression efficiency. Unlike halon agents, hexafluoropropane does not deplete the ozone layer and has a shorter atmospheric lifetime, making it an environmentally friendly alternative. Hexafluoropropane fire suppression systems are suitable for various locations, including electronic computer rooms, data centers, telecommunication facilities, medical facilities, industrial equipment, libraries, museums, clean rooms, soundproof rooms, emergency power facilities, and flammable liquid storage areas. They can also be used in production areas prone to fire hazards, such as paint production lines, aging rooms for electrical equipment, rolling mills, printing machines, oil switches, oil-immersed transformers, impregnation tanks, melting tanks, generators,

drying equipment, coal powder silos in cement production processes, as well as ship engine rooms and cargo holds.
