Hexagonal flange face bolt is a bolt with a head with six sides and is used to connect two or more flange faces. Hexagon flange face bolts are usually made of high-strength metal materials, such as carbon steel or alloy steel, to provide sufficient strength and durability. The head of the hexagonal flange bolt is hexagonal in shape, with a recessed hole on each side for tightening the bolt with a wrench or wrench. The other end of the bolt is usually a threaded rod that passes through the flange face and connects to the nut. When using hexagonal flange face bolts, pass the bolts through the holes in the flange face, and then tighten them with nuts to connect the two flange faces. By tightening the bolts and nuts, enough pressure can be generated to make the connection between the flange faces tight and safe.
