Hexagon-slotted and castle nuts are nuts with grooves cut into one end on all six sides. These grooves allow for the insertion of a split pin into a drilled hole in both the thread and the nut groove to prevent loosening. They are sometimes referred to as 'castle nuts' because their shape, including the grooves, resembles that of an old Western-style castle. Castle nut features a small surface area around the six grooved sides, facilitating a tight and compact wrap of the split pin around the nut.
