Hexapod Motion Controllers is one type of hexapod mechanics, it is designed to make parallel kinematics algorithms as easy and unnoticed by the user as possible: All target positions are commanded in Cartesian coordinates. For best integration in automation processes, the Hexapod motion controller is available with industrial EtherCAT interface. Special Hexapod software allows to simulate workspace and load of the hexapod, and to implement safety rules for all motions. For easy integration in a customer's setup, the hexapod system can be emulated as a virtual machine. This way delivery time can be profitably used for programming the live system.
