The global HFO Blowing Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

HFO (hydrofluoroolefin) blowing agents are not flammable, have zero Ozone Depletion Potential (ODP), and are low GWP. A low GWP product doesn't trap heat in the earth's atmosphere to contribute to global warming. HFC used to be the main blowing agent, but it is currently a substance on the reduction list of the Kigali Amendment. Under the "Double Carbon" goal, expanding the application of environmentally friendly blowing agent technology is one of the important measures to reduce the emission of non-carbon dioxide greenhouse gases such as hydrofluorocarbons (HFCs). Compared with HFC, HFO is more environmentally friendly and has a brighter future.
