According to our LPI (LP Information) latest study, the global High Accuracy Resolver market size was valued at US\$ 418.6 million in 2022. With growing demand in downstream market, the High Accuracy Resolver is forecast to a readjusted size of US\$ 1221 million by 2029 with a CAGR of 16.5% during review period.

The research report highlights the growth potential of the global High Accuracy Resolver market. High Accuracy Resolver are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of High Accuracy Resolver. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the High Accuracy Resolver market.

The rapid development of electric vehicles in downstream applications has provided a strong impetus for the development of resolvers. With the advancement of science and technology, automobiles, rail transit, machinery industry, etc. are gradually moving towards 'electrification' and even 'intelligentization'. Electrification is the basis of intelligence, and the electric drive system is the core of realizing electrification and is the basis for 'electrification' The equipment provides power and control; the drive motor is the power generating device of the electric drive system, and usually works in complex environments such as high temperature, high humidity, strong vibration, etc.; the position and speed information of the drive motor during operation are key core indicators of the motor's operating status. , which needs to be transmitted to the controller reliably, at high frequency and accurately, to achieve precise control of the

drive motor; the sensor is the only component that transmits position and speed information of the drive motor, and is a key core component of the drive motor. Due to its strong environmental suitability, high reliability and high sensing accuracy, resolvers are widely used in electrification fields with complex working conditions and high precision requirements.

Compared with rotary encoder, resolver can be used in harsh environments and has higher stability, which may seize some markets in the future. The growth of the alternative market will contribute to the expansion of the market size

Single-motor cars are generally equipped with one resolver, and dual-motor and multi-motor vehicles are equipped with more than two resolvers. With the penetration rate of dual-motor and multi-motor electric vehicles growing, the future market will outpace the sales growth of electric vehicles.

The continuous support of government policies has brought steady growth momentum to the market. Many countries have set the time for the shutdown of fuel vehicles, and there is huge room for growth in the electric vehicle market in the future.

Driven by low-carbon actions, major countries around the world have made commitments to 'carbon peaking' and 'carbon neutrality'. Electrification in the transportation field is an important starting point for reducing carbon emissions in various countries. Europe has set the world's strictest carbon emission standards. The United States has also introduced a series of electric vehicle subsidy policies and new energy vehicle-related support bills. Major countries in the world, including China, also regard the new energy vehicle industry as one of the important driving forces of economic growth, and have increased subsidies and investment guidance for new energy vehicles and related infrastructure.
