High-brightness diffusion film is a special type of optical film, mainly used to achieve diffusion and uniform distribution of light in optical devices, display devices and lighting applications. This kind of film usually has high transmittance and strong diffusion effect, which can effectively improve the optical performance of optical equipment. The working principle of high-brightness diffusion film is to achieve the light diffusion effect by changing the propagation direction and path of light, so that the light can be evenly dispersed after being reflected multiple times on the surface. This kind of film usually uses special materials and preparation processes to ensure it has good durability, efficient optical performance and stable optical properties.

The global High Brightness Diffusion Film market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
