The global High Carbon Steel Grit market size is predicted to grow from US\$ 2420 million in 2025 to US\$ 3544 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

In 2024, global High Carbon Steel Grit production reached approximately 3,080,000 tons, with an average global market price of around US\$ 800 per ton. Steel grit is made by crushing high carbon steel shot. Steel grit is used in pneumatics, blasting machines and blasting booths with closed abrasive circuits. The main purpose of steel grit is to remove old coatings, scale and also to clean highly rusted components.

The global High Carbon Steel Grit market is driven by strong demand from industries such as metal fabrication, automotive, shipbuilding, construction, and foundries, where it is widely used for surface preparation, cleaning, and shot blasting applications. With its hardness, durability, and recyclability, high carbon steel grit is considered a cost-effective abrasive compared to alternatives like aluminum oxide or garnet. The market is benefiting from infrastructure development, growing emphasis on efficient surface treatment in manufacturing, and stricter quality standards in coating and finishing processes. At the same time, environmental concerns and the push for sustainable blasting materials are encouraging manufacturers to improve production technologies and recycling efficiency, shaping the market's long-term growth trajectory.
