The global High Chrome Mill Internals (HCMI) market size is predicted to grow from US\$ 1857 million in 2025 to US\$ 3173 million in 2031; it is expected to grow at a CAGR of 9.3% from 2025 to 2031.

High chrome mill internals (HCMI) such as grinding media, heat resistance castings, diaphragm, etc. They are critical components for grinding operations used extensively in cement and thermal power plants. With significant cost savings achieved (~30-40%) through lower wear rate, increased

productivity and lower power consumption, HCMI are increasingly making inroads into the mining sector. This has, till now, been served by forged media (manganese steel, ni-hard iron, hyper steel and forged steel internals). Applications of HCMI differ in all three segments as the cement sector has most diversified applications of HCMI across the production process (limestone crusher, coal mill, raw mill and cement finishing mill) while segments like utilities require HCMI application for crushing and grinding coal.

High Chrome Mill Internals (HCMI) are wear-resistant products which are used as wear parts in the crushing / grinding operations in the mills/plants of Cement, Mining and Utility industries.

In this report, we research and analyze the high chrome grinding balls, high chromium alloy casting, liners (bolted and boltless) and diaphragms; especially the high chrome grinding balls, high chromium alloy casting.

Global High Chrome Mill Internals (HCMIs) market is dominated by Magotteaux, AIA Engineering, etc. The first two manufacturers account for about 65% of the market share.

India is the largest market for High Chrome Mill Internals (HCMIs) with a market share of about 30%, followed by China with about 15%.
