## Abstracts

The global High-Cis Methyl dihydrojasmonate market size is predicted to grow from US\$ 195 million in 2025 to US\$ 273 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

High-cis dihydrojasmonic acid methyl ester is a colorless to pale yellow liquid fragrance. Due to its high proportion of cis isomers, its aroma intensity is far superior to that of ordinary hedione. It possesses an elegant jasmine, lemon, and delicate powdery notes. By overcoming the 'dilution effect' of ordinary hedione, this ingredient is frequently used in high-end fragrances, providing a light, airy, strong, and long-lasting scent.

The upstream mainly relies on basic chemical raw materials. The core synthetic route starts with cyclopentanone and n-pentanal, prepared via a Michael addition reaction. The midstream is the core of this industrial chain, with extremely high technological barriers, mainly in chiral stereoselective catalysis and isomerization control. The downstream connects to the high-end fragrance and premium daily chemical markets.

Global sales in 2025 were approximately 1800 tons, with an average selling price of \$65/kg. The industry's gross profit margin is around 25%-35%.
