The global High Copper Solder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

High-copper solder is a copper-based solder whose main component is copper and also contains small amounts of other elements, such as zinc, tin, nickel, etc. High copper brazing filler metal is usually brazed in reducing atmosphere, inert atmosphere or vacuum, and can braze low carbon steel, low carbon alloy steel, tungsten, molybdenum, iron and nickel alloys, etc. The melting point of high-copper solder is around 1070~1080°C, and the gap filling gap is between 0~0.07mm. The advantages of high-copper solder are high strength, high toughness, high conductivity and corrosion resistance. The disadvantages are higher price and higher requirements on the brazing process.

United States market for High Copper Solder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for High Copper Solder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for High Copper Solder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
