A high-definition electronic bronchoscope is a medical device that uses advanced image sensing technology to perform high-resolution, real-time visual inspection of the trachea and bronchial cavities through an electronic imaging system. The endoscope is usually composed of a flexible insertion tube, a high-definition camera, a light source system, and an image processing unit. It can display the structure of the respiratory mucosa with clear and delicate images, and assist doctors in accurately diagnosing various airway lesions such as inflammation, tumors, bleeding, and foreign bodies. Compared with traditional optical endoscopes, high-definition electronic bronchoscopes have clearer images and more flexible operations. They are widely used in respiratory medicine, thoracic surgery, intensive care, and other fields. They are an important tool for early detection and precise treatment of modern respiratory diseases.
