High-density GPU Server Power Shelf is a modular power distribution and conversion assembly used in AI servers and GPU server racks. It houses multiple power supply units, busbars, control boards, protection devices and monitoring interfaces to provide stable high-current power for GPUs, CPUs, memory and accelerator modules. The product supports redundancy, hot swapping, high efficiency and rack-level power management. The market includes server power shelves and high-density power trays for GPU systems, but excludes standalone power supply units, complete servers and data center UPS systems.

The industry chain includes power semiconductors, magnetic components, capacitors, busbars, printed circuit boards, connectors, fans, sheet metal frames, controllers, sensors and firmware. Midstream production covers power architecture design, module assembly, thermal design, electrical testing, safety certification, firmware integration and

reliability validation. Downstream demand comes from AI servers, GPU clusters, cloud data centers, high-performance computing systems and enterprise accelerator platforms. Growth is driven by higher GPU power consumption, AI training clusters, rack-scale power architecture and demand for efficient server power delivery.
