According to our LPI (LP Information) latest study, the global High Density Interconnect PCB market size was valued at US\$ 8025.1 million in 2023. With growing demand in downstream market, the High Density Interconnect PCB is forecast to a readjusted size of US\$ 13110 million by 2030 with a CAGR of 7.3% during review period.

The research report highlights the growth potential of the global High Density Interconnect PCB market. High Density Interconnect PCB are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of High Density Interconnect PCB. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the High Density Interconnect PCB market.

A high-density interconnect (HDI) is a fastest growing technology used in the printed circuit board (PCB), which have higher wiring density per unit as compared to the conventional circuit boards. These HDI PCBs have finer lines and spaces (100 m), smaller vias (150 m), and capture pads (400 m). Moreover, HDI PCBs have a relatively higher connection pad density over conventional PCBs that is over 20 pads/cm². Hence, they are widely adopted in the consumer electronics sector and have a high growth potential in the automotive industry.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI,

5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
