A high-density sludge remover, also known as a high-density solids removal unit, is a device used to treat liquid waste, primarily to separate solid particles and other impurities from high-density waste liquids. It achieves this through a process of rotational separation and filtration, whereby liquid is subjected to high-speed centrifugal force, causing solid particles to separate and settle at the bottom of the vessel while

clean liquid is filtered out. High-density sludge removers are commonly used in sludge treatment, wastewater treatment, pulp and paper industry, and other chemical industries for the treatment of high-density waste liquids.
