## Abstracts

The global High Density Tungsten Alloy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

For high-density tungsten alloys, the tungsten content is usually above 90% (mass fraction), and its density is usually above 17. Due to the poor sintering performance of pure tungsten powder, it is difficult to reach the theoretical density even if it is sintered at a temperature close to its melting point. In addition, due to the brittle nature of tungsten, it is necessary to add a small amount of other metals to tungsten. Because high-density tungsten alloy has a series of excellent physical and mechanical properties and performance such as high density, high strength and hardness, good electrical and thermal conductivity, small thermal expansion coefficient, good corrosion resistance and oxidation resistance, good machinability and weldability, etc. , so it has been widely used in the field of modern science, defense industry and civilian industry.

United States market for High Density Tungsten Alloy is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for High Density Tungsten Alloy is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for High Density Tungsten Alloy is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
